Barker told us that it was no more than a temporary stopping-place on one of the jungle trails, no family ever remaining for more than a week. And so we found on our various return visits. The inhabitants were always different and their numbers varied considerably. Barker could not tell us how frequently these villages occur in the forests. He said he had been to only one other during his seven months' stay.

Every home possesses two or three calabashes, gourds and baskets, all dyed with ochre and some decorated with macaw or toucan feathers. All such objects of daily use have loops of string tied to them by which they can be hung from the hut's roof. Each family also has its little knives of capybara teeth. Firesticks are kept carefully packed away to keep them dry during disuse, as fire is always available from glowing embers that are never allowed to go out. We saw a number of baskets which women carry on their backs, but could not discover what they were used to carry—probably household utensils in the course of their journeyings. I could find no Waika musical instrument, but in one hut, the only one with no hammock in it, I came across a sort of fibre cape hanging from a beam. As this was the only garment of any sort that I saw, it may well have been a ritual robe.

In every house there was at least one fire, and joints of unskinned peccary and branches of green bananas hung from many rafters. In an unornamented earthenware jar shaped like a bell we saw a peccary's head boiling whole with all its hair and skin. In another hut a child was eating a small alligator which had been grilled on the embers.

The Waikas do not know salt and spat out the little we gave them in disgust. We thought that perhaps the huge quid of tobacco which the men, women and children keep under their lower lips might perhaps compensate for this deficiency. As with the Guaharibos, the women make up the quids every morning, impregnating them with their own saliva before passing them on to their mates.

Barker said he had never known Waikas to build or use any sort of river-craft—not even a raft. He told us that the

TRAILS AND TRAVEL. Trails lead out from the village in several directions. Some of them terminate in the gardens that surround the village, but a few of them continue on into the jungle and lead eventually to other villages. The unexperienced eye would not recognize them as trails, as they are hardly more than winding paths through brush, over or around logs, through streams and swamps, and up hills. The Yąnomamö take the most direct route to their destination, regardless of the terrain. A foreigner learns how to recognize a trail only after considerable experience. The most telltale signs are the numerous broken twigs at about knee height left by Yąnomamö travelers who compulsively keep their hands occupied snapping off brush and twigs as they walk. Another sign is the occasional log that is worn smooth from the tread of numerous travelers who prefer to walk along a log rather than go around it.

The most commonly used trail from Kąobawä's village leads to the two Shamatari villages, Reyaboböwei-teri and Mǫmariböwei-teri, southwest of Upper Bisaasi-teri. Hardly a week goes by in the dry season without a few individuals making a trip from one of these villages to Bisaasi-teri or vice versa. A group of young men can make this trip in one day if they walk rapidly and leave early in the morning. Older men, women, and children must plan on a two day journey, as they walk more slowly and rest more frequently. There are a number of temporary shelters along the trail built by previous visitors, so the traveler does not have to spend much time putting one of these into repair should he decide to camp overnight.
